Recent updates to the Leeds Inspired API

This document outlines the recent updates that have been made to the Leeds Inspired (LI) API and the information available on it: <https://api.leedsinspired.co.uk/>

Fields added to the API

1. Event **Website link** field: <link_website>
 - a. This will be used for event organisers to add an additional link to navigate users to the specific website for the event
 - b. This is a non-required field on the LI event form but this field will be auto-populated with the link to the event page on the LI website if it is left blank. Therefore a value will also be visible in the API
2. **Parent Event** fields: <parent_event> and <parent_event_UID>
 - a. These fields will be used by Leeds Inspired moderators to group events together under one larger event.
 - b. This is a non-required field and will only be populated when relevant
 - c. Two fields surfaced in the API for this:
 - i. <parent_event> - string value of the Parent Event
 - ii. <parent_event_UID> - unique identifier
3. **Event Summary** (*short overview*) field: <short_overview>
 - a. This field will be used by event organisers to provide a short overview of the event
 - b. This is a non-required field on the LI event form
 - c. The value of this form will be used as the main metadata for the event (eg. if the event is shared via social media)
 - d. This field is a plain text field, no formatting options are available
4. Event image **alt text** field: <image_alt>
 - a. Alt text is now a mandatory requirement when event organisers add an image to a new event on the LI site
5. **Price from** field: <price_from>
 - a. New field to allow event organisers to add a banding of ticket price

- b. This field is a required field IF the event organiser states that the event is not free
- 6. **Price to** field: <price_to>
 - a. New field to allow event organisers to add a banding of ticket price
 - b. This is a non-required field on the LI event form
- 7. **Pay As You Feel** field:
 - a. This is a radio button on the LI event form (Yes / No)
 - b. This field will only be surfaced on the API if the event organiser selects "Yes"
- 8. **Venue Image** field <venue_image> and relating **alt text** field <venue_image_alt>:
 - a. When an event organiser selects/adds the venue that an event is associated with, they now have the option to add an image (and mandatory alt text)
 - b. This is a non-required field on the LI event form
 - c. If the venue image is added then the alt text field is required so both fields will be surfaced on the API
